

It's what's on the inside that counts.

A crate is not just a wooden box; it's custom armor built to protect the unique item within. Approaching each project with a fresh perspective, our team of veteran custom packaging and crating experts provide complimentary consultations to thoroughly analyze the individual needs of each varied piece that we package for safe shipping.

Your place or ours?

We have the capability to prefabricate crates at our **30,000 square foot facility** or construct at your location. Regardless of where we build, we're prepared for changes and add-ons with fully-equipped service vehicles and a rolling stock of lumber and supplies.

Why Precision?

Innovative Equipment

Our investments in automated, efficient equipment allows us to pass cost savings down to our clients.

Administrative Technology

Our proprietary app captures all job information, signatures, and photos from the work site which are all immediately accessible by our clients.

Attention to Detail

We take every distinctive factor into consideration when determining packaging materials and methods (origin and destination conditions, means of transport, fragility of each item, etc.).

Diversified Offerings

From heavy machinery to delicate, fragile items, we pack and service it all.

Industrial Crating

We don't just build crates; we provide customized protection by blending proven construction techniques with the most current technology.

Palletizing and Skidding

A complete crating solution is not always the most practical approach. We offer heavy duty skidding services for easy forklift access. In addition to the logistical benefits, this option can yield considerable cost savings when compared to complete crating.

Vapor Barrier & Weather Shield

Crating alone may not provide sufficient protection for items transported overseas as salt air and humidity can wreak havoc on exposed metal and sensitive electronics.

Container Loading, Blocking, and Bracing

Our expert methods reduce the risk of cargo damage during ocean transit.

Also Available

- Art Installation
- Rigging
- Facility Relocation Consults and Planning (plants, labs, etc.)

All services include a free on-site or virtual consultation.
